LOCKHEED MARTIN

Mr. Michael Towle, 3HS31 USEPA Region 3 1650 Arch Street Philadelphia, PA 19103-2029

May 24, 2001

Dear Michael,

Enclosed you will find the unvalidated Form I's and associated documents for SDG C0001, RAS case 29238, 12<sup>th</sup> Street Landfill site. Please contact ESAT's PO, Fredrick Foreman, at 410-305-2629, if ESAT can be of any further assistance.

Sincerely,

Lisa D. Penix ESAT RSCC

cc: Fred Foreman, ESAT PO

# **Sample Information**

Sample C0004 was designated as the MS/MSD for the water samples.

# **Shipment Information**

Five water samples for BNA analysis were received on May 9, 2001, under Federal Express airbill no. 8286-5599-6774. All samples were received intact. The temperature of the cooler was 17.7°C.

| Date    | Cooler | Airbill #:     | Sample ID:                        | Temperature |
|---------|--------|----------------|-----------------------------------|-------------|
| Recv'd: | #:     |                |                                   | (C):*       |
| 5/9/01  | 1      | 8286-5599-6774 | C0001, C0002, C0003, C0004, C0005 | 17.7        |

<sup>\*</sup>No temperature blank was provided. Temperatures were taken using an IR gun to comply with SOW requirements.

Note: The Region was contacted regarding the sample temperature receipt. The Region instructed the laboratory to proceed with the analysis.

# **Analytical Information**

#### **BNA**

Among the target compounds in BNA analysis Indeno[1,2,3-cd]pyrene and Dibenzo[a,h]anthracene coeluted. Both compounds share ions 278 and 139. Fortunately, there is no ion 276 in Dibenzo[a,h]anthracene, and there is only 6% of ion 278 (relative to ion 276); and only 3% of ion 139 (relative to ion 138) present in Indeno[1,2,3-cd]pyrene. When ion 276 is used as a quant ion for Indeno[1,2,3-cd]pyrene, there should not be any interference problem. However, there will be a 6% overlap of ion 278 which will cause less accuracy for Dibenzo[a,h]anthracene. To guard against this deficiency, we include the secondary ion of 279 and 139 for the compound Dibenzo[a,h]anthracene in the method used as a further qualitative tool because there is no ion 279 present in the Indeno[1,2,3-cd]pyrene.

Lab Name: Clayton Laboratory Services (CLAYTN)

Case No.: 29238

SDG No.: C0001

Contract No.: 68-W-99-069

Clayton Work Order No.: 01050333

#### Technical/Administrative Problems and Corrective Actions

For the VOA and BNA analysis, the Hewlett-Packard software flags all manual edits or any compounds affected by the manual edit of an internal standard with an "m" on the reports. The peak is displayed with the baseline of the manual edits and is documented along with the associated "m" flag on the quant report and spectra report. These edits were necessary due to poor computer integration.

For the pesticide/PCB analysis, all manual edits are documented in the Timed Event Table and are flagged with a capital "M." The time with a "M" indicates the start time and a -M indicates the stop time of the integration. The baseline is then drawn and displayed on the corresponding chromatogram. These manual integrations were necessary due to poor computer integration.

I certify that this data package is in compliance with the terms and conditions of the contract, both technically and for completeness, for other than the conditions detailed above. Release of the data contained in this hardcopy data package and in the computer-readable data submitted on diskette has been authorized by the laboratory manager or his/her designee, as verified by the following signature.

Region 03 | Case 29238 | Lab CLAYTN | Issue Missing temperature blank | FINAL

Following is the resolution from Region 3. Per the Region, the lab should proceed with the analysis of the samples and note all of the problems in the case narrative. Please let me know if you have any other questions or problems.

Thanks,

DynCorp

I sopke to the site leader Brian Croft and he wants the analysis to proceed. He said they put two 10 pound bags of ice in the cooler and does not understand why the samples were received at 17.5 oC. Please note the problems in the case narrative and qualify the data as necessary.

Please respond to "(b) (4)

I received a voice-mail from CLAYTN to report that there was no temperature blank in the cooler for Case 29238. The lab used the IR gun to obtain a temperature of 17.7 C. The lab also reported that the samples arrived in a very large cooler (about 3 ft. long) and there were only two small bags of ice and a lot of vermiculite. The samples were not directly touching the ice in the cooler. Please advise on how the lab should proceed.

Thanks, (b) (4)

Case 29238

Heather,

Just an update on this case. This is the one that the temperature upon arrival was 17.7. John Quadra(?) from the region called me. I gave him info on the condition of the cooler upon arrival. He said he was going to have to defer it to a higher person. I have not heard back from him yet.
